THE L MARK OF LASER PRODUCT SAFETY LLC (LPS) is recognized globally as one of laser, LED, UV and/or IR radiation safety. LPS clients display the L Mark with great pride, either on the product or in the user manual, to indicate they have taken the initiative to have their product tested and certified by LPS. The L Mark on a product means that LPS has tested and evaluated representative samples of that product and determined that they meet the applicable radiation safety requirements. The L Mark may be only used on or in connection with products certified by LPS and under the terms of written agreement with LPS.

A PRODUCT CERTIFICATION from LPS is a valuable marketing tool. It means your product has successfully met stringent safety standards for radiation safety compliance. It will greatly assist you in promoting your product to the global marketplace.

LPS CERTIFICATION does not guarantee the product will perform correctly or that it is safe under all conditions (such as product misuse). The L Mark does not carry any legal weight beyond that of any other company's trademark. The L Mark is different from CE Marking or EMC Directives, which are required by law. However, local jurisdictional authorities, such as building, electrical and fire inspectors, may be unwilling to allow a product for installation unless it displays a third-party safety compliance mark such as the L Mark.

IF YOU HAVE QUESTIONS regarding the L Mark or submitting a laser, LED, UV and/or IR product to LPS for evaluation and eligibility to bear the L Mark, please contact any LPS office or visit the LPS website.
